* 2 DIMM: Supports one pair of modules inserted into the paired slots to enable Dual-Channel memory configuration. Install the modules into **DDR5_A2, DDR5_B2** for best compatibility and performance.

* Speed dropping policy according to Intel processor specification (XMP disabled):

DDR5 4800 MHz speed drops down to 4400 MHz when 2 DIMMs of the same channel are populated e.g., DDR5_A1/_A2. Please adjust your setup according to the recommendation above.

DDR5 4800 MHz speed drops down to 4000 MHz when 4 DIMMs are populated (1Rx8/ x16 modules).

DDR5 4800 MHz speed drops down to 3600 MHz when 4 DIMMs are populated (2Rx8/ x16 modules).

* When running XMP at DDR5 5000 MHz or higher, the system's stability depends on the CPU's capabilities.

* When enabling Dual-Channel mode with two or four memory modules, it is recommended that using the same capacity, brand, speed, and chips of memory modules.

* Memory modules listed as above is for reference only. Due to massive memory models in market, we can only verify some of them.
